Foreword	iv
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Abbreviated terms	4
5 Types of devices in contact with blood (as categorized in ISO 10993-1)	5
5.1 Non-blood-contact devices.....	5
5.2 External communicating devices.....	5
5.2.1 General.....	5
5.2.2 External communicating devices that serve as an indirect blood path.....	5
5.2.3 External communicating devices directly contacting circulating blood.....	5
5.3 Implant devices.....	6
6 Characterization of blood interactions	6
6.1 General requirements.....	6
6.2 Categories of tests and blood interactions.....	12
6.2.1 Recommended tests for interactions of devices with blood.....	12
6.2.2 Non-contact devices.....	13
6.2.3 External communicating devices and implant devices.....	13
6.2.4 Limitations.....	13
6.3 Types of tests.....	13
6.3.1 <i>In vitro</i> tests.....	13
6.3.2 <i>Ex vivo</i> tests.....	14
6.3.3 <i>In vivo</i> tests.....	14
Annex A (informative) Preclinical evaluation of cardiovascular devices and prostheses	16
Annex B (informative) Recommended laboratory tests — Principles, scientific basis and interpretation	21
Annex C (informative) Thrombosis — Methods for <i>in vivo</i> testing	32
Annex D (informative) Haematology/haemolysis — Methods for testing — Evaluation of haemolytic properties of medical devices and medical device materials	39
Annex E (informative) Complement — Methods for testing	46
Annex F (informative) Less common laboratory tests	49
Annex G (informative) Tests which are not recommended	53
Bibliography	55

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 194, *Biological and clinical evaluation of medical devices*.

This third edition cancels and replaces the second edition (ISO 10993-4:2002), which has been technically revised.

It also incorporates the Amendment ISO 10993-4:2002/Amd 1:2006.

The following changes were made:

- a) some definitions have been revised and new definitions have been added;
- b) Tables 1 and 2 have been consolidated into a single new [Table 1](#) with test categories and headers reorganized to emphasize and include material and mechanical-induced haemolysis testing and *in vitro* and *in vivo* testing for assessment of risk for thrombosis;
- c) Tables 3 and 4 have been consolidated into a single new [Table 2](#) with a simplified list of suggested and most common tests;
- d) [Annex B](#) has been updated to cover only the most common practiced tests for assessing blood interactions;
- e) [Annex C](#) has been added to cover the topic of *in vivo* thrombosis and methods for testing;
- f) [Annex D](#), which was Annex C in the previous edition, has been updated and now includes added information on mechanically-induced haemolysis;
- g) [Annex E](#) has been added to cover the topic of complement testing and best test method practices;
- h) [Annexes F and G](#) have been added to present the less common tests used to assess interactions with blood and the tests that are not recommended for preclinical assessment of medical device blood interaction, respectively. Many of these methods were previously included in [Annex B](#);

This is a preview of "ISO 10993-4:2017". [Click here to purchase the full version from the ANSI store.](#)

- i) subtle language refinements can be found throughout the revised document;
- j) the Bibliography has been reorganized by common subjects of interest and updated with additional and more current references.

Introduction

The selection and design of test methods for the interactions of medical devices with blood should take into consideration device design, materials, clinical utility, usage environment and risk benefit. This level of specificity can only be covered in vertical standards.

The initial source for developing this document was the publication, *Guidelines for blood/material interactions*, Report of the National Heart, Lung, and Blood Institute^[14] chapters 9 and 10. This publication was subsequently revised^[15].
