Essential oils — General guidance on chromatographic profiles —

Part 1:
Preparation of chromatographic profiles for presentation in standards

Huiles essentielles — Directives générales concernant les profils chromatographiques —

Partie 1: Élaboration des profils chromatographiques pour la présentation dans les normes
Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11024-1 was prepared by Technical Committee ISO/TC 54, Essential oils.

International Standard ISO 11024 consists of the following parts, under the general title Essential oils — General guidance on chromatographic profiles:

— Part 1: Preparation of chromatographic profiles for presentation in standards
— Part 2: Utilization of chromatographic profiles of samples of essential oils

Annexes A and B of this part of ISO 11024 are for information only.
