Second edition
2015-07-01

Lasers and laser-related equipment — Standard optical components —

Part 1: Components for the UV, visible and near-infrared spectral ranges

Lasers et équipements associés aux lasers — Composants optiques standards —

Partie 1: Composants pour les plages spectrales UV, visible et proche de l'infrarouge

Reference number
ISO 11151-1:2015(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/TC 172, *Optics and photonics*, Subcommittee SC 9, *Electro-optical systems*.

This second edition cancels and replaces the first edition (ISO 11151-1:2000), which has been technically revised with the following changes:

- [Clause 2](#) was revised;
- [Clause 4](#) was changed to align with [Clause 2](#);
- the “Class A surface imperfection” values in [Tables 2](#) to [6](#) were revised;
- the “Major edge length” and “Thickness” values in [Table 7](#) were revised;
- the “Edge thickness” and “Centre thickness” values in [Table 8](#) were revised;
- the “Edge thickness” in [Table 9](#) were revised;
- [Figure 1](#) was revised.

ISO 11151 consists of the following parts, under the general title *Lasers and laser-related equipment — Standard optical components*:

- *Part 1: Components for the UV, visible and near-infrared spectral ranges*
- *Part 2: Components for the infrared spectral range*

[Annex A](#) of this part of ISO 11151 is for information only.

Introduction

Lasers are used in a wide variety of applications, including medicine, materials processing, information technology, and metrology. Most lasers contain optical windows and mirrors (intracavity) and most laser systems use a variety of windows, beamsplitters, deflectors, mirrors, and lenses. Those components used in high power laser applications have to withstand high peak power and/or energy densities to avoid laser-induced damage, thus their component specifications are more demanding than those used in low power applications.
