

ISO 11334-4

**Assistive products for walking,
manipulated by one arm —
Requirements and test methods —**

**Part 4:
Walking sticks with three or
more legs**

*Produits d'assistance à la marche manipulés avec un bras —
Exigences et méthodes d'essai —*

Partie 4: Cannes à trois pieds ou plus

**Second edition
2024-10**

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Apparatus	5
5 Test conditions	6
6 General requirements and test methods	7
6.1 Risk analysis.....	7
6.2 Maximum user mass/load limits.....	7
6.3 Structural requirements.....	7
6.3.1 Handgrip.....	7
6.3.2 Adjustment mechanisms and locking devices.....	7
6.3.3 Leg section and tips.....	7
6.3.4 Leg height from the ground of the walking stick for outside use.....	7
6.3.5 Shaft distance from the user.....	8
7 Materials	8
7.1 General.....	8
7.2 Biocompatibility and toxicity.....	8
7.3 Infection and microbiological contamination.....	9
7.3.1 General.....	9
7.3.2 Cleaning and disinfection.....	9
7.4 Resistance to corrosion.....	9
8 Temperatures of parts that come in contact with human skin	9
9 Prevention of traps for parts of the human body	9
9.1 Holes and clearances.....	9
9.2 V-shape openings.....	10
10 Surfaces, corners and edges	10
11 Static stability	10
11.1 Requirements for static stability.....	10
11.1.1 Inward direction static stability.....	10
11.1.2 Outward direction, forward direction and backward direction static stability.....	10
11.2 Test methods for static stability.....	10
11.2.1 Inward direction static stability test.....	10
11.2.2 Outward direction, forward direction and backward direction static stability test.....	10
12 Static strength	12
12.1 Static strength of walking sticks.....	12
12.1.1 Requirements for static strength of walking sticks.....	12
12.1.2 Test method for static strength of walking sticks.....	12
12.1.3 Alternative test method for static strength of walking sticks.....	12
12.2 Static strength for the legs and separation part.....	13
12.2.1 Requirements for static strength of the legs and separation part.....	13
12.2.2 Test methods for static strength of the legs and separation part.....	13
13 Durability	14
13.1 Requirements for durability.....	14
13.2 Test method for durability.....	14
13.3 Alternative test method for durability.....	15

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 173, *Assistive products*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 293, *Assistive products and accessibility*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 11334-4:1999), which has been technically revised.

The main changes are as follows:

- the minimum requirements for stability have been removed and are replaced by requirements on disclosure of the stability performance level for the specified direction;
- the static strength test for the legs and separation part was added;
- [Clause 6](#) on general requirements for assistive products for walking was added.

A list of all parts in the ISO 11334 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

A walking stick with three or more legs can be used when a person needs assistance for walking. It provides more stability when walking and standing compared with other types of sticks and canes manipulated by one arm and can thus reduce the risk of falling.
