**Large yachts — Strength,  
weathertightness and watertightness of  
glazed openings —**

Part 1:  
**Design criteria, materials, framing and  
testing of independent glazed openings**

*Grands yachts — Résistance, imperméabilité au mauvais temps et  
étanchéité des ouvertures vitrées —*

*Partie 1: Critères de conception, matériaux, armature et essais des  
ouvertures vitrées indépendantes*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 11336-1 was prepared by Technical Committee ISO/TC 8, *Ships and marine technology*, Subcommittee SC 12, *Ships and marine technology — Large yachts*.

ISO 11336 consists of the following parts, under the general title *Large yachts — Strength, weathertightness and watertightness of glazed openings*:

- *Part 1: Design criteria, materials, framing and testing of independent glazed openings*
- *Part 2: Glazed opening integrated into adjacent structure (directly bonded to the bulkhead or shell), design criteria, structural support, installation and testing*
- *Part 3: Quality assurance, installation and in-service inspection*
