

Second edition
2023-11

Large yachts — Strength, weathertightness and watertightness of glazed openings —

Part 1: Design criteria, materials, framing and testing of independent glazed openings

*Grands yachts — Résistance, étanchéité aux intempéries et étanchéité
à l'eau des ouvertures vitrées —*

*Partie 1: Critères de conception, matériaux, encadrement et essais des
ouvertures vitrées indépendantes*

7.4.4	Apparatus	31
7.4.5	Acceptance criteria	33
7.4.6	Test report	33
8	Storm shutters and deadlights	34
8.1	General	34
8.2	Storm shutters	34
8.2.1	General practice	34
8.2.2	Glazed equivalents to providing storm shutters	34
8.2.3	Construction of storm shutters	35
8.2.4	Design pressures and design flexural stresses	35
8.2.5	Structural model	35
8.2.6	Scantlings	35
8.2.7	Attachment to bulkhead	36
8.3	Robustness of protection of hull openings	36
8.3.1	General practice	36
8.3.2	Equivalent secondary barriers	37
8.3.3	Testing	37
8.3.4	Testing of metal or composite deadlights	37
8.3.5	Testing of equivalent glazing deadlight	37
8.4	Owner's manual	39
Annex A (normative) Unsupported pane dimensions		40
Annex B (normative) Calculation of the stiffness of a pane		42
Annex C (informative) Scantling formula		43
Annex D (informative) Statistical coefficient K_n and worked example		44
Annex E (informative) Worked examples of equivalent thickness calculation for Type A laminates		45
Annex F (informative) Worked examples of equivalent thickness calculation for Type B laminates		48
Annex G (informative) Design pressure in lieu of storm shutters		49
Annex H (informative) Changes between ISO 11336-1:2012 and this document		51
Annex I (informative) Direct method for the determination of the glazing laminate cross-section		54
Annex J (informative) Testing of glazing as secondary barriers		58
Bibliography		59

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 8, *Ships and marine technology*, Subcommittee SC 12, *Ships and marine technology — Large yachts*.

This second edition cancels and replaces the first edition (ISO 11336-1:2012), which has been technically revised.

The main changes are as follows:

- the Scope has been expanded to include length, number of passengers and glazing materials;
- the design pressure model has been parameterized and adapted to cover larger yachts;
- more advanced scantling calculation methods have been added;
- a new approach on robustness of superstructure and hull glazing has been added;
- [Annex H](#) has been replaced with information on the main changes since the first edition;
- [Annexes I](#) and [J](#) have been added.

A list of all parts in the ISO 11336 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
