Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Apparatus	2
6 Test specimen preparation	3
6.1 General.....	3
6.2 Test specimens from finished products.....	3
6.3 Test specimen conditioning.....	3
6.4 Test specimen mass.....	3
7 Calibration	3
7.1 Mass calibration.....	3
7.2 Temperature calibration.....	3
8 Procedure	5
8.1 General.....	5
8.2 Temperature scanning mode.....	5
8.3 Isothermal mode.....	6
8.4 Buoyancy correction.....	6
9 Expression of results	6
9.1 Graphical representation.....	6
9.2 Determination of increase in mass.....	6
9.3 Determination of loss in mass.....	7
9.3.1 Single-stage decrease in mass.....	7
9.3.2 Multi-stage decrease in mass.....	8
9.3.3 Determination of residue.....	11
10 Test report	11
Annex A (informative) Calibration materials for Curie-point temperature calibration	12
Bibliography	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 5, *Physical chemical properties*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 249, *Plastics*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 11358-1:2014), which has been technically revised. The main changes compared to the previous edition are as follows:

- a normative reference to ISO 472 has been added;
- definitions specified in ISO 472 have been removed;
- measurement under reactive atmosphere has been added;
- the apparatus specifications have been changed;
- the calibration procedures have been revised;
- buoyancy correction has been added;
- use of a differential thermogravimetric curve has been added.

A list of all parts in the ISO 11358 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
