Contents	Page
1 Scope	1
2 Normative references	1
3 Term and definition	1
4 Information to be supplied by the purchaser to the supplier	2
4.1 Essential information	2
4.2 Additional information	2
5 Substrate	2
6 Heat treatment of steels	2
6.1 General	2
6.2 Heat treatment before black oxidizing	3
6.3 Heat treatment after black oxidizing	3
7 Requirements	3
7.1 Appearance and surface quality	3
7.2 Oxalic acid test resistance	3
7.3 Resistance of austenitic stainless steels to neutral salt spray	3
8 Sampling	3
Annex A (informative) Processing procedures for iron and stainless steels	6
Annex B (informative) Methods of test for neutral surface reaction and for porosity and continuity	7

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11408 was prepared by Technical Committee ISO/TC 107, *Metallic and other inorganic coatings*, subcommittee SC 8, *Chemical conversion coatings*.

Annexes A and B of this International Standard are for information only.
