Road vehicles — Vehicle test methods for electrical disturbances from narrowband radiated electromagnetic energy —

Part 2: Off-vehicle radiation sources

Véhicules routiers — Méthodes d’essai d’un véhicule soumis à des perturbations électriques par rayonnement d’énergie électromagnétique en bande étroite —

Partie 2: Sources de rayonnement hors du véhicule
Contents

Foreword iv

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Test conditions 1

5 Test location 2

6 Test instrumentation 4

   6.1 Field generating device 4
   6.2 Field probes 5
   6.3 Stimulation and monitoring of the device under test (DUT) 5

7 Test set-up 5

   7.1 Vehicle placement 6
   7.2 Field generating device location (relative to vehicle and shielded enclosure) 6

      7.2.1 Antenna constraints 6
      7.2.2 TLS constraints 6

   7.3 Vehicle test configurations 6

      7.3.1 Vehicle not connected to the power grid 6
      7.3.2 Vehicle in charging mode connected to the power grid 7
      7.3.3 Vehicle in charging mode through wireless power transmission (WPT) 15

8 Test procedure 17

   8.1 Test plan 18
   8.2 Test method 18

      8.2.1 Field calibration 18
   8.3 Test report 24

Annex A (informative) Function performance status classification 25
**Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

The committee responsible for this document is ISO/TC 22, Road vehicles, Subcommittee SC 32, Electrical and electronic components and general system aspects.

Annex A of this part of ISO 11451 is for information only.

This fourth edition cancels and replaces the third edition (ISO 11451-2:2005) which has been technically revised.

ISO 11451 consists of the following parts, under the general title Road vehicles — Vehicle test methods for electrical disturbances from narrowband radiated electromagnetic energy:

— Part 1: General principles and terminology
— Part 2: Off-vehicle radiation sources
— Part 3: On-board transmitter simulation
— Part 4: Bulk current injection (BCI)
