**Aerospace — Nuts, anchor, self-locking,  
floating, two lug, with incremental  
counterbore, with MJ threads,  
classifications: 900 MPa (at ambient  
temperature)/235 °C, 900 MPa (at ambient  
temperature)/315 °C and 900 MPa  
(at ambient temperature)/425 °C —  
Dimensions**

*Aéronautique et espace — Écrous à river, à freinage interne, flottants,  
double patte, à chambrage très profond, à filetage MJ, classifications:  
900 MPa (à température ambiante)/235 °C, 900 MPa (à température  
ambiante)/315 °C et 900 MPa (à température ambiante)/425 °C —  
Dimensions*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 12272 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 4, *Aerospace fastener systems*.

## Introduction

The dimensions specified in this International Standard have been determined to allow production of a part which will satisfy the requirements of the procurement specification ISO 5858.
