Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 12667 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 15, *Interchangeability of components of commercial vehicles and buses*.

Commercial vehicles and buses — Cross-tooth propeller shaft flanges, type T

1 Scope

This International Standard specifies the nominal dimensions and tolerances which affect interchangeability between cross-tooth propeller shaft flanges, type T, used on commercial vehicles and buses.

Dimensions and tolerances of the mating parts, i.e. type T cross-tooth gearbox flanges, are specified in ISO 8667.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 8667:1992, *Commercial vehicles and buses — Cross-tooth gearbox flanges, type T*.

ISO 13715:—¹⁾, *Technical drawings — Corners — Vocabulary and indication on drawings*.

3 Dimensions and tolerances

Nominal dimensions and tolerances which affect the interchangeability of type T propeller shaft flanges shall be as shown in figures 1 and 2, and table 1.

4 Designation

Propeller shaft flanges meeting the requirements of this International Standard shall be identified by a certain number of elements, to be given in the following order:

- a) reference to this International Standard;
- b) type code: T;
- c) size: d_1

EXAMPLE

Designation of a type T propeller shaft flange with $d_1 = 150$ mm:

Flange ISO 12667 - T 150

1) To be published.
