First edition
2020-11

Railway applications — Polymeric composite sleepers, bearers and transoms —

Part 2: Product testing

Applications ferroviaires — Traverses et supports en matériaux composites à matrice polymère —

Partie 2: Essais de produit

Contents

	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviated terms	1
5 Product characteristics	3
5.1 General.....	3
5.2 Bending resistance.....	3
5.2.1 Test arrangements.....	3
5.2.2 Initial reference test loads.....	10
5.2.3 Test procedures at the centre section for the negative bending moments.....	10
5.2.4 Test procedures at the centre section for the positive bending moments.....	14
5.2.5 Test procedures at the rail seat.....	18
5.3 Tests with geometric ballast plate (GBP) or with flat plate (FP) at rail seat.....	21
5.3.1 Stiffness with GBP or with FP at rail seat.....	21
5.3.2 Compression test with GBP or with FP at rail seat.....	21
5.4 Thermal expansion.....	22
5.4.1 Principle.....	22
5.4.2 Apparatus.....	22
5.4.3 Procedure.....	23
5.5 Interface between the rail and the sleeper.....	24
5.5.1 Permanent deformation of screw/insert as a function of temperature.....	24
5.5.2 Fastening system.....	26
5.5.3 Electrical resistance.....	27
5.5.4 Screw, spike, cast-in and glued-in fastening components.....	27
5.6 Fire.....	27
5.7 System Test.....	27
Annex A (informative) Geometric ballast plate (GBP)	28
Annex B (informative) Test procedures for stiffness measurement of polymeric composite sleeper or bearer with GBP	31
Annex C (informative) Test procedures for stiffness measurement of polymeric composite sleeper with flat plate (FP)	38
Annex D (informative) System test	39
Bibliography	42

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 269, *Railway applications*, Subcommittee SC 1, *Infrastructure*.

A list of all parts in the ISO 12856 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
