	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Classification	2
5 Materials and construction	2
6 Dimensions and tolerances	3
7 Physical properties	3
7.1 General	3
7.2 Tensile strength and elongation at break	3
7.3 Accelerated ageing	3
7.4 Compression set (only rubber hoses)	4
7.5 Resistance to liquids (only class A hoses)	4
7.6 Loss in mass on heating (only plastics hoses)	4
8 Physical tests on finished hose or tubing	4
8.1 Minimum burst pressure	4
8.2 Flexibility (for type 1 and type 2 only)	4
8.3 Ozone resistance (rubber hoses only)	4
8.4 Ultraviolet (UV) resistance (plastics hoses only)	4
8.5 Adhesion	5
8.6 Heat resistance	5
8.7 Ageing	5
9 Frequency of tests	5
10 Marking	6
Annex A (normative) Heat-resistance test	7
Annex B (normative) Type and routine tests	8
Annex C (informative) Recommended production acceptance tests	9

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 1, *Rubber and plastics hoses and hose assemblies*.

This second edition cancels and replaces the first edition (ISO 13363:2004), which has been technically revised with the following changes:

- class B hoses to be of rubber materials only;
- the abrasion test has been removed until a new abrasion test standard has been developed and the corresponding International Standard published.

It also incorporates the Technical Corrigendum ISO 13363:2004/Cor.1:2008.
