

INTERNATIONAL ISO
STANDARD 13878

This is a preview of "ISO 13878:1998". [Click here to purchase the full version from the ANSI store.](#)

First edition
1998-03-15

Soil quality — Determination of total nitrogen content by dry combustion ("elemental analysis")

*Qualité du sol — Détermination de la teneur totale en azote par combustion
sèche («analyse élémentaire»)*

Reference number
ISO 13878:1998(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13878 was prepared by Technical Committee ISO/TC 190, *Soil quality*, Subcommittee SC 3, *Chemical methods and soil characteristics*.

Annexes A and B of this International Standard are for information only.
