Third edition
2016-04-15

Fine ceramics (advanced ceramics, advanced technical ceramics) — Test method for flexural strength of monolithic ceramics at room temperature

*Céramiques techniques — Méthode d'essai de résistance en flexion des
céramiques monolithiques à température ambiante*

Reference number
ISO 14704:2016(E)

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	3
5 Apparatus	3
5.1 Testing machine.....	3
5.2 Test fixture.....	3
5.2.1 General.....	3
5.2.2 Bearings.....	4
5.2.3 Four-point fixture: semi-articulating.....	4
5.2.4 Four-point fixture: fully articulating.....	4
5.2.5 Three-point fixture: semi-articulating.....	4
5.2.6 Three-point fixture: fully articulating.....	5
5.2.7 Positioning of bearings.....	5
5.2.8 Fixture material.....	6
5.3 Micrometer.....	6
6 Test pieces	6
6.1 Test piece size.....	6
6.1.1 Machined test pieces.....	6
6.1.2 As-fired or heat-treated test pieces.....	6
6.2 Test piece preparation.....	7
6.2.1 General.....	7
6.2.2 As-fired.....	7
6.2.3 Customary machining procedure.....	7
6.2.4 Component-matched procedure.....	7
6.2.5 Basic machining procedure.....	7
6.2.6 Parallelism, orthogonality and chamfer sizes.....	8
6.2.7 Handling of test pieces.....	9
6.2.8 Number of test pieces.....	9
7 Procedure	9
8 Calculation	11
9 Test report	12
10 Strength scaling factors	13
Annex A (informative) General information	14
Annex B (normative) Test fixtures	15
Annex C (informative) Typical fracture patterns in ceramic test pieces	21
Annex D (informative) Chamfer correction factors	23
Annex E (informative) Weibull scaling factors	26
Bibliography	28

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 206, *Fine ceramics*.

This third edition cancels and replaces the second edition (ISO 14704:2008), which has been technically revised.
