## Contents

Page

Foreword.....	iv
1 Scope .....	1
2 Normative references .....	1
3 Terms and definitions .....	1
4 Accuracy of testing.....	1
5 Test conditions .....	1
5.1 Total visual magnification ( $M_{TOT\ VIS}$ ) .....	1
5.2 Difference in total visual magnification between left and right optical systems .....	2
5.3 Difference in axes between left and right optical systems.....	2
5.4 Difference in the centres of the image fields between left and right optical systems.....	2
5.5 Difference in imaging rotations between right and left images .....	2
5.6 Axial shift of object plane by magnification change .....	2
5.7 Lateral shift of image plane by magnification change.....	2
5.8 Focus difference between left and right optical systems.....	2
5.9 Resolution for the highest magnification at the centre of the field .....	2
5.10 Difference in exit pupil heights between left and right optical systems .....	2
5.11 Minimum range for interpupillary distance .....	2
5.12 Calibration error if a dioptr scale is used .....	2
5.13 Minimum eyepiece dioptr adjustment range.....	2
6 Test methods.....	3
6.1 Apparatus .....	3
6.2 Apparatus configuration .....	4
6.3 Test procedures .....	4
Bibliography .....	9

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 15227 was prepared by Technical Committee ISO/TC 172, *Optics and optical instruments*, Subcommittee SC 5, *Microscopes and endoscopes*.
