Leather — Tests for colour fastness — Colour fastness to water spotting

*Cuir — Essais de solidité des teintures — Solidité des teintures à la goutte
d'eau*

Reference number
ISO 15700:1998(E)
IULTCS/IUF 420

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 15700 was prepared by the Fastness Tests Commission of the International Union of Leather Technologists and Chemists Societies (IUF Commission, IULTCS). It is based on IUF 420 published in *J. Soc. Leather Tech. Chem.*, **59**, p. 99 (1975), and declared an official method of the IULTCS in 1975.

Annex A of this International Standard is for information only.
