| | |
|--|----|
| Foreword..... | v |
| 1 Scope | 1 |
| 2 Normative references | 1 |
| 3 Relevant quantities | 2 |
| 3.1 Quantities to express building performance | 2 |
| 3.1.1 Apparent sound reduction index R' | 2 |
| 3.1.2 Standardized level difference D_{nT} | 2 |
| 3.1.3 Normalized level difference D_n | 3 |
| 3.1.4 Relation between quantities | 3 |
| 3.2 Quantities to express element performance | 3 |
| 3.2.1 Sound reduction index R | 3 |
| 3.2.2 Sound reduction index improvement ΔR | 3 |
| 3.2.3 Element normalized level difference $D_{n,e}$ | 4 |
| 3.2.4 Normalized level difference for indirect airborne transmission $D_{n,s}$ | 4 |
| 3.2.5 Flanking normalized level difference $D_{n,f}$ | 4 |
| 3.2.6 Vibration reduction index K_{ij} | 5 |
| 3.2.7 Other element data | 5 |
| 3.3 Other terms and quantities | 6 |
| 3.3.1 Direct transmission | 6 |
| 3.3.2 Indirect transmission | 6 |
| 3.3.3 Indirect airborne transmission | 6 |
| 3.3.4 Indirect structure-borne transmission (flanking transmission) | 6 |
| 3.3.5 Direction-averaged junction velocity level difference $\overline{D_{v,ij}}$ | 6 |
| 3.3.6 Flanking sound reduction index R_{ij} | 6 |
| 4 Calculation models | 7 |
| 4.1 General principles | 7 |
| 4.2 Detailed model for structure-borne transmission | 9 |
| 4.2.1 Input data | 9 |
| 4.2.2 Transfer of input data to in-situ values | 10 |
| 4.2.3 Determination of direct and flanking transmission in-situ | 12 |
| 4.2.4 Interpretation for several types of elements | 13 |
| 4.2.5 Limitations | 16 |
| 4.3 Detailed model for airborne transmission | 16 |
| 4.3.1 Determination from measured direct transmission for small elements | 16 |
| 4.3.2 Determination from measured total indirect transmission | 17 |
| 4.3.3 Determination from measured transmission for the separate elements of a system | 17 |
| 4.4 Simplified model for structure-borne transmission | 17 |
| 4.4.1 Calculation procedure | 17 |
| 4.4.2 Input data | 19 |
| 4.4.3 Limitations | 20 |
| 5 Accuracy | 20 |
| Annex A (normative) Symbols | 21 |
| Annex B (informative) Sound reduction index for monolithic elements | 25 |
| B.1 Sound reduction index in frequency bands | 25 |
| B.2 Weighted sound reduction index | 28 |
| Annex C (informative) Structural reverberation time | 31 |

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 15712-1 was prepared by CEN/TC 126, *Acoustic properties of building products and of buildings* (as EN 12354-1:2000), and was adopted without modification by Technical Committee ISO/TC 43, *Acoustics*, Subcommittee SC 2, *Building acoustics*.

Throughout the text of this document, read "...this European Standard..." to mean "...this International Standard...".
