Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Rubbers	1
5 Symbol groups	2
5.1 The “M” group.....	2
5.2 The “O” group.....	2
5.3 The “Q” group.....	3
5.4 The “R” group.....	3
5.4.1 Description.....	3
5.4.2 General.....	3
5.4.3 Rubbers having substituent carboxylic acid groups (COOH) on the polymer chain.....	4
5.4.4 Rubbers containing halogen on the polymer chain.....	4
5.5 The “T” group.....	4
5.6 The “U” group.....	5
5.7 The “Z” group.....	5
Bibliography	6

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*.

This fifth edition cancels and replaces the fourth edition (ISO1629:2013), which has been technically revised.

The main change is as follow:

- hydrogenated SBR (some unsaturation remains) as HSBR has been added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

It is not the intention of this document to conflict with, but rather to act as a supplement to, existing trade names and trademarks.

It is intended that in technical papers or presentations, the complete name of the rubber be used.

The symbols given in this document follow the chemical name in order to allow for use in references.

NOTE The nomenclature of thermoplastic elastomers is described in ISO 18064.
