Foreword v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Personnel qualification 3

5 CR quality indicators 3
5.1 Description of CR quality indicators for user and manufacturer tests 3
5.1.1 General 3
5.1.2 Contrast sensitivity quality indicator 3
5.1.3 Duplex wire quality indicator 3
5.1.4 Converging line pair quality indicator 3
5.1.5 Linearity quality indicators 3
5.1.6 T-target 4
5.1.7 Scanner slipping quality indicator 4
5.1.8 Shading quality indicator 4
5.1.9 Central beam alignment quality indicator (BAM-snail) 4
5.2 Application procedures for CR quality indicators 4
5.2.1 General 4
5.2.2 Exposure of CR quality indicators (user test) 4
5.2.3 Initial assessment of CR quality indicators (user test) 4
5.2.4 Periodical control (user test) 5
5.3 Imaging plate fading 5

6 Procedure for quantitative measurement of image quality parameters 5
6.1 Measurement of the normalized Signal-to-Noise Ratio 5
6.1.1 Step Exposure Method (manufacturer test) 5
6.1.2 Step Wedge Method (manufacturer test and enhanced user test) 8
6.1.3 Contrast sensitivity measurement (manufacturer and user test) 9
6.2 Measurement of minimum read-out intensity of computed radiographs (manufacturer procedure) 9
6.3 Determination of un-sharpness 10
6.3.1 General 10
6.3.2 MTF-method (manufacturer test) 10
6.3.3 Duplex wire method (manufacturer and user test) 11
6.3.4 Converging line pair quality indicators (manufacturer and user test) 12
6.4 Other tests 12
6.4.1 Geometric distortions (manufacturer and user test) 12
6.4.2 Laser beam function (manufacturer and user test) 12
6.4.3 Blooming or flare (manufacturer and user test) 13
6.4.4 Scanner slipping (manufacturer and user test) 13
6.4.5 Shading (manufacturer and user test) 13
6.4.6 Erasure (manufacturer and user test) 13
6.4.7 IP artefacts (user test) 13

7 CR System Classification and Interpretation of Results 14
7.1 General 14
7.2 Range of CR System Classification 14
7.3 Determination of ISO Speed (manufacturer procedure) 15

Annex A (informative) **Example for I_{IPX} measurement** 16

Annex B (informative) **Example of CR test phantom** **20**
B.1 Location and alignment of CR Quality Indicators in a CR Phantom **20**
B.2 Shading test **21**
B.2.1 General **21**
B.2.2 Shading Quality Indicator **21**
B.2.3 Procedure **21**
B.3 Central beam alignment **21**
B.3.1 CR Alignment Quality Indicator (BAM-snail) **21**
B.3.2 Procedure **22**
B.4 Contrast sensitivity quality indicator **22**

Annex C (informative) **Guidance for application of various tests and test methods** **23**
C.1 Manufacturer tests **23**
C.2 Tests after repair, upgrade or the use of an improved IP **23**
C.3 User tests for long-term stability **23**

Bibliography **25**

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 16371-1 was prepared by the European Committee for Standardization (as EN 14784-1:2005) and was adopted under a special “fast-track procedure”, by Technical Committee ISO/TC 135, *Non-destructive testing*, Subcommittee SC 5, *Radiation methods*, in parallel with its approval by the ISO member bodies.

ISO 16371 consists of the following parts, under the general title *Non-destructive testing — Industrial computed radiography with storage phosphor imaging plates*:

— *Part 1: Classification of systems*

The following part is planned:

— *Part 2: General principles for testing of metallic materials using X-rays and gamma rays*
