ISO 16809

**Non-destructive testing —
Ultrasonic thickness determination**

Essais non destructifs — Détermination de l'épaisseur par ultrasons

**Third edition
2025-06**

|---|-----------|
| Foreword | v |
| 1 Scope | 1 |
| 2 Normative references | 1 |
| 3 Terms and definitions | 1 |
| 4 Modes of determination | 1 |
| 5 General requirements | 3 |
| 5.1 Ultrasonic instruments..... | 3 |
| 5.2 Probes..... | 3 |
| 5.3 Couplant..... | 3 |
| 5.4 Reference blocks..... | 4 |
| 5.5 Test objects..... | 4 |
| 5.6 Qualification of test personnel..... | 4 |
| 6 Application of the techniques | 4 |
| 6.1 Surface condition and surface preparation..... | 4 |
| 6.2 Technique..... | 5 |
| 6.2.1 General..... | 5 |
| 6.2.2 Determination during manufacture..... | 5 |
| 6.2.3 Determination of residual wall thickness in service..... | 6 |
| 6.3 Selection of probe..... | 6 |
| 6.4 Selection of ultrasonic instrument..... | 7 |
| 6.5 Special test conditions..... | 7 |
| 6.5.1 General..... | 7 |
| 6.5.2 Materials different from the material of the reference block..... | 7 |
| 6.5.3 Determination at temperatures below 0 °C..... | 7 |
| 6.5.4 Determination at elevated temperatures..... | 8 |
| 6.5.5 Hazardous atmospheres..... | 8 |
| 7 Instrument setting | 8 |
| 7.1 General..... | 8 |
| 7.2 Methods of setting..... | 8 |
| 7.2.1 General..... | 8 |
| 7.2.2 Ultrasonic instruments with numerical display..... | 9 |
| 7.2.3 Ultrasonic instruments with A-scan presentation..... | 9 |
| 7.3 Checks of settings..... | 10 |
| 8 Influence on accuracy | 11 |
| 8.1 Operational conditions..... | 11 |
| 8.1.1 Surface conditions..... | 11 |
| 8.1.2 Temperature of the test object..... | 11 |
| 8.1.3 Metallic coating..... | 11 |
| 8.1.4 Non-metallic coating..... | 12 |
| 8.1.5 Geometry..... | 13 |
| 8.1.6 Material homogeneity..... | 13 |
| 8.2 Test equipment..... | 14 |
| 8.2.1 Resolution..... | 14 |
| 8.2.2 Range..... | 14 |
| 8.3 Evaluation of accuracy..... | 15 |
| 8.3.1 General..... | 15 |
| 8.3.2 Influencing parameters..... | 15 |
| 8.3.3 Method of calculation..... | 15 |
| 9 Influence of materials | 15 |
| 9.1 General..... | 15 |
| 9.2 Inhomogeneity..... | 15 |
| 9.3 Anisotropy..... | 15 |

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 135, *Non-destructive testing*, Subcommittee SC 3, *Ultrasonic testing*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 138, *Non-destructive testing*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This third edition cancels and replaces the second edition (ISO 16809:2017), which has been technically revised.

The main changes are as follows:

- terminology in the document has been modified, changing "measurement" to "determination";
- terminology has been aligned with ISO 16831;
- ultrasonic instruments with A-scan presentation that conform with ISO 22232-1 can be used to determine wall thicknesses;
- all figures have been improved.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
