## Test conditions for milling machines with table of variable height — Testing of the accuracy —

### Part 1: Machines with horizontal spindle

*Conditions d'essai des machines à fraiser à table de hauteur variable —  
Contrôle de la précision —*

*Partie 1: Machines à broche horizontale*

Reference number  
ISO 1701-1:2004(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 1701-1 was prepared by Technical Committee ISO/TC 39, *Machines tools*, Subcommittee SC 2, *Test conditions for metal cutting machine tools*.

This first edition of ISO 1701-1 as well as ISO 1701-2:2004 cancels and replaces ISO 1701-0:1984, ISO 1701-2:1997 and ISO 1701-3:1997, which have been revised only editorially. The relevant sections of ISO 1701-0 have been incorporated into this part of ISO 1701.

ISO 1701 consists of the following parts, under the general title *Test conditions for milling machines with table of variable height — Testing of the accuracy*:

- *Part 1: Machines with horizontal spindle*
- *Part 2: Machines with vertical spindle*
