

IULTCS/IUC 18-2

First edition
2017-02

Leather — Chemical determination of chromium(VI) content in leather —

Part 2: Chromatographic method

*Cuir — Détermination chimique de la teneur en chrome(VI) du cuir —
Partie 2: Méthode chromatographique*

Reference numbers
ISO 17075-2:2017(E)
IULTCS/IUC 18-2:2017(E)

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Chemicals	2
6 Apparatus and materials	2
7 Procedure	3
7.1 Sampling and preparation of samples.....	3
7.2 Preparation of analytical solution.....	3
7.3 Chromatographic conditions.....	4
7.4 Calibration.....	4
7.5 Determination of the recovery rate.....	5
8 Calculation and expression of results	5
8.1 Calculation of chromium(VI) content.....	5
8.2 Recovery rate (according to 7.5).....	6
8.3 Expression of results.....	6
9 Test report	6
Annex A (informative) Accuracy	7
Annex B (informative) Chromatographic conditions for direct detection method	9
Annex C (informative) Chromatographic conditions for method with post-column reaction	12
Annex D (informative) Comparison between the colorimetric method (ISO 17075-1) and the ionic chromatography method (ISO 17075-2)	16

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

ISO 17075-2 was prepared by the Chemical Test Commission of the International Union of Leather Technologists and Chemists Societies (IUC Commission, IULTCS) in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 289, *Leather*, the secretariat of which is held by UNI, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

IULTCS, originally formed in 1897, is a world-wide organization of professional leather societies to further the advancement of leather science and technology. IULTCS has three Commissions, which are responsible for establishing international methods for the sampling and testing of leather. ISO recognizes IULTCS as an international standardizing body for the preparation of test methods for leather.

This first edition of ISO 17075-2, together with ISO 17075-1, cancels and replaces ISO 17075:2007, which has been technically revised.

The main changes compared to ISO 17075:2007 are as follows:

- the chromatographic analytical technique has been added;
- the sample preparation has been revised;
- mechanical shaking in [7.1](#) and [7.2](#) has been revised.

A list of all parts in the ISO 17075 series can be found on the ISO website.
