

Rubber hoses and hose assemblies for aircraft ground fuelling and defuelling — Specification

*Tuyaux et flexibles en caoutchouc pour le ravitaillement
carburant et la vidange des avions au sol — Spécifications*

ISO 1825

**Fifth edition
2026-02**

Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Classification	2
5 Service reeling diameter	3
6 Material and construction	3
6.1 Hoses.....	3
6.2 Hose assemblies.....	3
7 Dimensions and tolerances	4
7.1 Inside diameters.....	4
7.2 Thickness.....	4
7.3 Concentricity.....	4
7.4 Tolerances on length.....	4
7.5 Mass per unit length of hose.....	4
8 Physical properties	5
8.1 Rubber compounds.....	5
8.2 Finished hoses and hose assemblies.....	6
9 Electrical properties	7
9.1 Type B and type E (electrically bonded).....	7
9.2 Type C and type F (electrically conductive incorporating a semi-conductive cover compound).....	8
10 Frequency of testing	8
10.1 Hoses.....	8
10.2 Hose assemblies.....	8
11 Marking	8
11.1 Hoses.....	8
11.2 Hose assemblies.....	9
12 Test certificate or test report	9
13 Cleanliness	9
14 Protection for dispatch and storage	10
Annex A (normative) Method for determination of fuel-soluble matter	11
Annex B (normative) Method of test for cold embrittlement	12
Annex C (normative) Method for determination of adhesion between components	13
Annex D (normative) Method for determination of resistance to fuel contamination	14
Annex E (normative) Method of test for flexibility at 20 °C	15
Annex F (normative) Method of test for low temperature flexibility	16
Annex G (normative) Method of test for crush recovery	17
Annex H (normative) Method for determination of cyclic kinking resistance	19
Annex I (normative) Flammability test	20
Annex J (normative) Hydrostatic test	22
Annex K (normative) Method of test for vacuum resistance	23
Annex L (normative) Method of test for security of attachment of couplings	24

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 1, *Rubber and plastics hoses and hose assemblies*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 218, *Rubber and plastics hoses and hose assemblies*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This fifth edition cancels and replaces the fourth edition (ISO 1825:2017), which has been technically revised.

The main changes compared to the previous edition are as follows:

- addition of two temperature classes (to bring the document in line with EI 1529);
- addition of nominal sizes 51 and 75;
- removal of the working pressure test in [Table 6](#) and [Annex J](#) (to bring the document in line with EI 1529);
- modification of the ozone resistance at 1 ppm instead of 0,5 ppm to align with EI 1529;
- removal of tests for production acceptance;
- revision of [Annexes F](#) and [G](#) (to bring the document in line with EI 1529);
- revision of the method specified in [Annex L](#).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
