Textile slings — Lifting slings for general purpose lifting operations made from fibre ropes — High modulus polyethylene (HMPE)

*Élingues textiles — Élingues de levage pour opérations de levage
pour usage général en cordages en fibres — Polyéthylène à haut
module (HMPE)*

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Hazards	8
5 Sling materials and components	9
5.1 Fibre ropes.....	9
5.2 Coatings.....	10
5.3 Cover (sleeves, jackets).....	10
5.4 Mechanical components.....	10
5.5 Other materials and components.....	10
6 Sling constructions, fabrication and lifting configurations	10
6.1 Sling constructions.....	10
6.2 Fabrication.....	11
6.2.1 Splicing.....	11
6.2.2 Considerations for connecting hardware and fittings.....	12
6.2.3 Other requirements for mechanical components.....	13
6.3 Lifting configurations.....	13
6.4 Design factor.....	14
6.5 Working load limit.....	15
6.5.1 Calculation of the working load limit of a lifting configuration (WLL_{LC}).....	15
6.5.2 Calculation of the working load limit of a lifting configuration (WLL_{LC}) as a consequence of bending losses.....	17
6.6 Effective work length.....	18
6.7 Traceability code.....	18
7 Sling verification	18
7.1 General.....	18
7.2 Qualification of personnel.....	19
7.3 Type test for verification of sling constructions.....	19
7.3.1 General.....	19
7.3.2 Methodology.....	19
7.3.3 Basic procedure for type testing/verification of MBF.....	20
7.3.4 Extended procedure for type testing/verification of MBF.....	22
7.3.5 Type test to verify the interaction of a sling construction with fittings.....	22
7.4 Manufacturing tests.....	23
7.4.1 Visual examination.....	23
7.4.2 Determination of the effective work length of sling legs.....	23
7.4.3 Proof testing requirements.....	23
7.4.4 Breaking force tests.....	24
7.5 Type and manufacturing testing in case of modifications to sling constructions.....	24
7.6 Visual examination.....	24

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 38, *Textiles*.

Introduction

This International Standard has been prepared to be a standard providing one means of complying with the essential safety requirements.
