Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Methods of measurement for contact lenses	1
4.1 General.....	1
4.2 Radius of curvature.....	2
4.2.1 General.....	2
4.2.2 Optical spherometry (rigid contact lenses).....	3
4.2.3 Sagittal height method.....	6
4.3 Label back vertex power.....	11
4.3.1 General.....	11
4.3.2 Focimeter specification.....	11
4.3.3 Calibration.....	12
4.3.4 Focimeter measurement of rigid lenses.....	13
4.3.5 Focimeter measurement of hydrogel lenses.....	13
4.3.6 Measurement of hydrogel contact lenses by immersion in saline.....	13
4.3.7 Addition power measurement.....	14
4.4 Diameters and widths.....	14
4.4.1 Total diameter.....	14
4.4.2 Zone diameters and widths.....	19
4.5 Thickness.....	20
4.5.1 General.....	20
4.5.2 Dial gauge method.....	20
4.5.3 Low-force mechanical gauge method.....	21
4.6 Edge inspection.....	22
4.7 Determination of inclusions and surface imperfections.....	22
4.8 Spectral transmittance.....	23
4.8.1 General.....	23
4.8.2 Instrument specification, test conditions and procedure.....	23
4.9 Saline solution for testing.....	24
4.9.1 General.....	24
4.9.2 Formulation.....	24
4.9.3 Preparation procedure.....	25
4.9.4 Packaging and labelling.....	25
5 Test report	26
Annex A (informative) Measurement of rigid contact lens curvature using interferometry	27
Annex B (informative) Measurement of label back vertex power of soft contact lenses immersed in saline using the Moiré deflectometer or Hartmann methods	29
Annex C (informative) Measurement of the radius of curvature of contact lenses using the ophthalmometer	33
Annex D (informative) Paddle support for focimeters used for power measurements of contact lenses	38
Bibliography	40

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 7, *Ophthalmic optics and instruments*.

This second edition cancels and replaces the first edition (ISO 18369-3:2006), which has been technically revised.

A list of all parts in the ISO 18369 series can be found on the ISO website.
