Foreword	vii
Introduction	viii
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Preparatory information	1
5 General test requirements	2
6 Test methods for measuring transmittance — General	2
6.1 Uncertainty of measurement.....	2
6.2 Reporting compliance.....	3
6.3 Applicability.....	3
6.4 Position and direction of measurement.....	3
6.5 Wavelength intervals.....	3
6.6 Test report.....	3
7 Luminous transmittance	3
7.1 Calculations of luminous transmittance from spectral values.....	3
7.2 Test report.....	3
7.3 Broadband method of measurement of luminous transmittance.....	4
7.3.1 Apparatus.....	4
7.3.2 Calibration.....	4
7.3.3 Procedure.....	4
7.3.4 Test reports for luminous transmittance values.....	4
7.4 Measurement of uniformity of luminous transmittance.....	4
7.4.1 Unmounted filter covering one eye.....	4
7.4.2 Filter covering both eyes.....	6
7.5 Transmittance matching at right and left reference points.....	9
7.5.1 Test method.....	9
7.5.2 Calculations.....	10
7.5.3 Test report.....	10
8 Ultraviolet transmittance	10
8.1 General.....	10
8.2 Spectral transmittance and mean spectral transmittance.....	10
8.3 Solar UV transmittance.....	10
8.4 Solar UV-A transmittance.....	10
8.5 Solar UV-B transmittance.....	10
8.6 Mean UV-A transmittance.....	10
8.7 Mean UV-B transmittance.....	11
8.8 Mean 380 nm to 400 nm transmittance.....	11
8.9 Test report.....	11
9 Blue-light transmittance	11
9.1 Solar blue-light transmittance.....	11
9.1.1 Calculation of solar blue-light transmittance from spectral values.....	11
9.1.2 Broadband method of measurement of solar blue-light transmittance.....	11
9.2 Blue-light transmittance from artificial sources.....	11
9.2.1 Calculation of blue-light transmittance from artificial sources from spectral values.....	11
9.2.2 Broadband method of measurement of blue-light transmittance from artificial sources.....	12
9.2.3 Test report.....	12
10 IR transmittance	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 94, *Personal safety — Protective protective equipment*, Subcommittee SC 6, *Eye and face protection*.

This first edition of ISO 18526-2, together with ISO 18526-1, cancels and replaces ISO 4854:1981.

A list of all parts in the ISO 18526 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This family of documents comprised of the ISO 16321 series, the ISO 18526 series and the ISO 18527 series was developed in response to the worldwide stakeholders' demand for minimum requirements and test methods for eye and face protectors traded internationally. ISO 4007 gives the terms and definitions for all the various product types. The test methods are given in the ISO 18526 series, while the requirements for occupational eye and face protectors are given in the ISO 16321 series. Eye protectors for specific sports are mostly dealt with by the ISO 18527 series. A guidance document, ISO 19734, for the selection, use and maintenance of eye and face protectors is under preparation.
