2016-09-15

**Fine ceramics (advanced ceramics,
advanced technical ceramics) —
Mechanical properties of ceramic
composites at ambient temperature
in air atmospheric pressure —
Determination of elastic properties by
ultrasonic technique**

Céramiques techniques (céramiques avancées, céramiques techniques avancées) — Propriétés mécaniques des céramiques composites à température ambiante sous air à pression atmosphérique — Détermination des propriétés élastiques par méthode ultrasonore

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	5
5 Significance and use	6
6 Test equipment	7
6.1 Immersion tank with temperature measurement device	7
6.2 Holder of the probes and test object	7
6.3 Probes	7
6.4 Pulse generator	7
6.5 Signal display and recording system	7
7 Test object	7
8 Test object preparation	8
9 Test procedure	8
9.1 Choice of frequency	8
9.2 Establishment of the test temperature	9
9.3 Reference test without test object	9
9.4 Measurement with the test object	9
9.4.1 Determination of the bulk density and thickness	9
9.4.2 Mounting of the test object	9
9.4.3 Acquisition of different angles of incidence	9
10 Calculation	10
10.1 Delay	10
10.2 Calculation of the propagation velocities	10
10.3 Calculation of the refracted angle, θ_r	10
10.4 Identification of the elastic constants, C_{ij}	10
10.4.1 Basic considerations	10
10.4.2 Calculation of C_{33}	12
10.4.3 Calculation of C_{22} , C_{23} and C_{44}	12
10.4.4 Calculation of C_{11} , C_{13} and C_{55}	12
10.4.5 Calculation of C_{12} and C_{66}	12
10.5 Polar plots of the velocity curves	13
10.6 Calculation of the quadratic deviation and the confidence interval	14
10.7 Calculation of the engineering constants	14
11 Test validity	15
11.1 Measurements	15
11.2 Criterion of validity for the reliability of the C_{ij} components	15
12 Test report	15
Annex A (informative) Example of a presentation of the results for a material with orthotropic symmetry	17
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 206, *Fine ceramics*.
