

## ISO 18692-1

### Fibre ropes for offshore stationkeeping —

#### Part 1: General specification

*Cordages en fibres pour le maintien en position des structures  
marines —*

*Partie 1: Spécification générale*

Second edition  
2026-06

|                                                              |           |
|--------------------------------------------------------------|-----------|
| <b>Foreword</b>                                              | <b>v</b>  |
| <b>1 Scope</b>                                               | <b>1</b>  |
| <b>2 Normative references</b>                                | <b>1</b>  |
| <b>3 Terms and definitions</b>                               | <b>1</b>  |
| <b>4 Materials</b>                                           | <b>3</b>  |
| 4.1 Rope core material                                       | 3         |
| 4.1.1 Fibre tenacity                                         | 3         |
| 4.1.2 Marine grade                                           | 3         |
| 4.2 Rope cover material                                      | 4         |
| 4.3 Other materials                                          | 4         |
| <b>5 Requirements — Rope properties</b>                      | <b>4</b>  |
| 5.1 Minimum breaking strength                                | 4         |
| 5.2 Minimum core tenacity                                    | 4         |
| 5.3 Dynamic stiffness at end of bedding-in                   | 4         |
| 5.4 Torque properties                                        | 4         |
| 5.4.1 Torque-neutral rope                                    | 4         |
| 5.4.2 Torque-matched rope                                    | 5         |
| 5.5 Cyclic loading performance                               | 5         |
| 5.6 Particle ingress protection                              | 5         |
| <b>6 Requirements — Rope layout and construction</b>         | <b>5</b>  |
| 6.1 General                                                  | 5         |
| 6.2 Type of construction                                     | 5         |
| 6.3 Rope core                                                | 5         |
| 6.4 Protective cover                                         | 5         |
| 6.5 Terminations                                             | 6         |
| 6.6 Length of rope                                           | 6         |
| <b>7 Rope testing</b>                                        | <b>7</b>  |
| 7.1 Type test                                                | 7         |
| 7.1.1 General                                                | 7         |
| 7.1.2 Sampling and testing                                   | 7         |
| 7.1.3 Strength and stiffness tests                           | 7         |
| 7.1.4 Linear density test                                    | 7         |
| 7.1.5 Cyclic loading endurance test                          | 7         |
| 7.1.6 Torque properties tests                                | 8         |
| 7.1.7 Particle ingress protection test                       | 8         |
| 7.1.8 Protective cover thickness                             | 8         |
| 7.2 Testing of current production                            | 8         |
| 7.2.1 Sampling and testing                                   | 8         |
| 7.2.2 Length measurement                                     | 8         |
| <b>8 Rope manufacturing report</b>                           | <b>9</b>  |
| 8.1 Prototype rope                                           | 9         |
| 8.2 Current production                                       | 9         |
| <b>9 Certification documentation</b>                         | <b>9</b>  |
| <b>10 Marking, labelling and packaging</b>                   | <b>9</b>  |
| 10.1 Marking                                                 | 9         |
| 10.2 Labelling                                               | 9         |
| 10.3 Packaging                                               | 10        |
| <b>Annex A (normative) Fibre qualification and testing</b>   | <b>11</b> |
| <b>Annex B (normative) Rope testing</b>                      | <b>14</b> |
| <b>Annex C (informative) Guidance for rope handling care</b> | <b>24</b> |

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 38, *Textiles*.

This second edition cancels and replaces the first edition (ISO 18692-1:2018), which has been technically revised.

The main changes are as follows:

- a notice has been added related to safety risks related to products used in this document;
- the document has been restructured aligning the different clauses;
- the document has been revised to allow different methods for verifying marine-grade of ropes made from high-modulus fibres.

A list of all parts in the ISO 18692 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
