ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 214, *Elevating work platforms*.

This third edition cancels and replaces the second edition (ISO 18878:2013), which has been technically revised.

The main changes are as follows:

- the title was changed to remove the term “(driver)”;
- in the Introduction, reference to TC 214 was removed;
- in the Scope, the opening statement was clarified for accuracy and readability;
- in [Clause 3](#), additional terms were added to support use of these terms throughout the document;
- in [Clause 4](#), text was added to ensure safe use requirements are also used in the training process;
- in [Clause 5](#), the existing language was replaced by the contents of former Clause 7;
- in [Clause 6](#), requirements for familiarization were removed as they are now found in ISO 18893;
- in the annexes, the term "examiner" was replaced by "trainer".

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

This document is one of a group of standards for mobile elevating work platforms (MEWPs), as part of a programme of work regarding standardization of terminology and general principles for training operators of elevating work platforms used to raise (elevate), and position personnel (and related work tools and materials) to a work position where a work task is to be performed. Local jurisdictions can use this document to develop detailed training requirements particular to the local conditions.
