Foreword ..... **iv**

Introduction ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **2**

4 Symbols and abbreviated terms **3**

5 General requirements **4**
5.1 Application 4
5.2 Existing safety control system (SCS) 4
5.3 Safety requirements and/or protective/risk reduction measures 4

6 System design **4**
6.1 Overview 4
6.2 General requirements 5
6.3 Hardware design 5

7 System safety performance evaluation **6**
7.1 Machine performance level achieved (MPL_a) 6
7.2 Hardware safety evaluation 7
7.2.1 General 7
7.2.2 Fault consideration 7
7.2.3 Fault exclusion 7
7.2.4 Mean time to dangerous failure ($MTTF_d$) 7
7.3 Diagnostic coverage (DC) 8
7.3.1 Diagnostic coverage(DC) of electronic safety control systems (ESCS) 8
7.3.2 Diagnostic coverage (DC) of non-electronic safety control systems (N/ESCS) 8
7.4 Requirements for MPL_a = d for hydraulic steering and braking systems 8
7.4.1 General 8
7.5 Category classifications 9
7.5.1 General 9
7.5.2 Category B/Category 1 12
7.5.3 Category 2 13
7.5.4 Conflicting safety functions 14
7.5.5 Considerations for the SRP/CS of fail-operational systems 14
7.6 Combination of SCS to achieve an overall MPL_a 14

8 Information for use and maintenance **16**
8.1 General 16
8.2 Operator's manual 16

Annex A (informative) **Example systems and evaluations** **17**

Annex B (normative) **Compatibility with other functional safety standards** **31**

Annex C (informative) **Safety function evaluation** **32**

Annex D (normative) **Exceptions, exclusions, additions to ISO 13849-1:2023 and ISO 13849-2:2012** **34**

Bibliography **37**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 127, *Earth-moving machinery*, Subcommittee SC 2, *Safety, ergonomics and general requirements,* in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 151, *Construction equipment and building material machines - Safety*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 19014-2:2022), which has been technically revised.

The main changes are as follows:

— correction of machine performance level (MPL) error in Annex C;

— correction of typographical errors in Figure C.1;

— removal of Category 2M;

— removal of hydraulic system robustness (HSR);

— removal of Annex B;

— addition of requirements for MPL_a=d within Category 1.

A list of all parts in the ISO 19014 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

This document addresses systems of all energy types used for functional safety in earth-moving machinery.

The structure of safety standards in the field of machinery is as follows:

Type-A standards (basic standards) give basic concepts, principles for design and general aspects that can be applied to machinery.

Type-B standards (generic safety standards) deal with one or more safety aspects, or one or more types of safeguards that can be used across a wide range of machinery.

— Type-B1 standards on particular safety aspects (e.g. safety distances, surface temperature, noise).

— Type-B2 standards on safeguards (e.g. two-hands controls, interlocking devices, pressure sensitive devices, guards).

Type-C standards (machinery safety standards) deal with detailed safety requirements for a particular machine or group of machines.

This document is a type-C standard as stated in ISO 12100:2010.

This document is of relevance, in particular, for the following stakeholder groups representing market players with regard to machinery safety:

— machine and component manufacturers (small, medium and large enterprises);

— health and safety bodies (regulators, accident prevention organizations, market surveillance etc.).

Others can be affected by the level of machinery safety achieved in accordance with this document:

— machine users and employers (small, medium and large enterprises);

— machine users and employees (e.g. trade unions, organizations for people with special needs);

— service providers, e. g. for maintenance (small, medium and large enterprises);

— consumers (in case of machinery intended for use by consumers).

The above-mentioned stakeholder groups have been given the possibility to participate in the drafting process of this document.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When the requirements of this type-C standard differ from those in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.
