Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	3
4 List of significant hazards	6
5 Safety requirements and measures for controls	9
5.1 Safety and reliability of control systems	9
5.2 Control devices	10
5.3 Start	10
5.4 Safe stops	11
5.4.1 General	11
5.4.2 Normal stop	11
5.4.3 Operational stop	11
5.4.4 Emergency stop	11
5.5 Braking function of tool spindles	12
5.6 Mode selection	12
5.7 Spindle speed changing	13
5.7.1 Spindle speed changing by changing belts on the pulleys	13
5.7.2 Spindle speed changing by incremental speed change motor	13
5.7.3 Infinitely variable speed by frequency inverter	13
5.8 Failure of any power supply	14
5.9 Manual reset control	14
5.10 Enabling control	14
5.11 Machine moving parts speed monitoring	14
5.12 Time delay	15
6 Safety requirements and measures for protection against mechanical hazards	15
6.1 Stability	15
6.1.1 Stationary machines	15
6.1.2 Displaceable machines	15
6.2 Risk of break-up during operation	15
6.3 Tool holder and tool design	15
6.3.1 General	15
6.3.2 Spindle locking	16
6.3.3 Circular saw blade fixing device	16
6.3.4 Flange dimension for circular saws blades	16
6.4 Braking	16
6.4.1 Braking of tool spindles	16
6.4.2 Maximum run-down time	16
6.4.3 Brake release	17
6.5 Safeguards	17
6.5.1 Fixed guards	17
6.5.2 Interlocking movable guards	17
6.5.3 Hold-to-run control	18
6.5.4 Two-hand control	18
6.5.5 Electro-sensitive protective equipment (ESPE)	18
6.5.6 Pressure-sensitive protective equipment (PSPE)	19
6.6 Prevention of access to moving parts	19
6.6.1 General	19
6.6.2 Guarding of tools	19
6.6.3 Guarding of drives	20
6.6.4 Guarding of shearing and/or crushing zones	20

6.7	Impact hazard	20
6.8	Clamping devices	20
6.9	Measures against ejection	21
6.9.1	General	21
6.9.2	Guards materials and characteristics	21
6.10	Work-piece supports and guides	22
7	Safety requirements and measures for protection against other hazards	22
7.1	Fire	22
7.2	Noise	22
7.2.1	Noise reduction at the design stage	22
7.2.2	Noise emission measurement	22
7.3	Emission of chips and dust	24
7.4	Electricity	24
7.4.1	General	24
7.4.2	Displaceable machines	25
7.5	Ergonomics and handling	25

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 39, *Machine tools*, Subcommittee SC 4, *Woodworking machines*.

A list of all parts in the ISO 19085 series can be found on the ISO website.

Introduction

The ISO 19085 series of International Standards provides technical safety requirements for the design and construction of woodworking machinery. It concerns designers, manufacturers, suppliers and importers of the machines specified in the Scope. It also includes a list of informative items that the manufacturer will need to give to the user.

This document is a type-C standard as stated in ISO 12100.

The machinery concerned and the extent to which hazards, hazardous situations or hazardous events are covered are indicated in the Scope of this document.

When requirements of this type-C standard are different from those which are stated in type-A or type-B standards, the requirements of this type-C standard take precedence over the requirements of the other standards for machines that have been designed and built according to the requirements of this type-C standard.

The full set of requirements for a particular type of woodworking machine are those given in the part of ISO 19085 applicable to that type, together with the relevant requirements from this document, to the extent specified in the Scope of the applicable part of ISO 19085.

For woodworking machines not covered by an applicable part, this document can be used as a guide. However, the designer will then need to perform a full risk assessment according to ISO 12100 and design the means for reducing the risks arising from relevant hazards.

As far as possible, in parts of ISO 19085 other than this document, safety requirements have been treated by way of reference to the relevant sections of this document, to avoid repetition and reduce their length. The other parts contain replacements and additions to the common requirements given in this document.

NOTE Requirements for tools are given in EN 847-1:2013 and EN 847-2:2013.
