ISO 20038

Banking and related financial services — Key wrap using advanced encryption standard (AES)

Banque et autres services financiers — Enveloppe de clé utilisant AES (norme de chiffrement avancé)

Second edition
2026-08

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms, definitions and abbreviated terms	2
3.1 Terms and definitions	2
3.2 Abbreviated terms	6
4 Notation	8
5 Key block elements	8
6 Key block format	9
6.1 General	9
6.2 Key block header (KBH)	10
6.2.1 General	10
6.2.2 Changing key headers	13
6.3 Defined values for key block headers	14
6.3.1 Key usage	14
6.3.2 Algorithm	19
6.3.3 Mode of use	20
6.3.4 Key version number	21
6.3.5 Exportability	21
6.3.6 Optional block ID	22
6.4 Encoding	47
6.4.1 General	47
6.4.2 RSA key pairs	48
6.4.3 Elliptic curve cryptography (ECC) key pairs	49
7 Key block binding and validation methods	49
7.1 General	49
7.2 Key block binding method using key derivation	50
7.2.1 Key block binding and encryption	50
7.2.2 Key derivation	51
7.2.3 Key derivation binding validation method —AES	54
8 Examples	55
8.1 AES key block example	55
8.1.1 General	55
8.1.2 Constructing the key block header	55
8.2 AES key block with optional blocks	61
8.2.1 General	61
8.2.2 Keys used in the example	61
8.2.3 Constructing the key block header	62
8.3 RSA key block example with CT optional block	64
8.3.1 General	64
8.3.2 Keys used in the example	64
8.3.3 Constructing the key block header	65
8.3.4 Constructing the binary key data	67
8.3.5 Constructing the complete key block	68
8.4 ECC key block example with CT certificate chain optional block	70
8.4.1 General	70
8.4.2 Keys used in the example	70
8.4.3 Constructing the key block header	71
8.4.4 Constructing the binary key data	73
8.4.5 Constructing the complete key block	74
8.5 CTR mode without padding	75

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 68, *Financial services*, Subcommittee SC 2, *Financial services, security*.

This second edition cancels and replaces the first edition (ISO 20038:2017), which has been technically revised.

The main changes are as follows:

- updated for compatibility with ANSI X9.143-2022.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

The secure management of cryptographic keys requires that their values and usage constraints be protected for both confidentiality and integrity.

This document provides a method of wrapping cryptographic keys in order to provide confidentiality and integrity protection for the keys when being transmitted or stored. The mechanism is designed to use advanced encryption standard (AES) specified in FIPS 197 as the wrapping cipher.
