Foreword.....	v
1 Scope	1
2 Normative references	1
3 Terms, definitions, symbols and abbreviations	2
4 General	7
4.1 General principles	7
4.2 Documentation	7
4.3 Alternative methods	7
4.4 Materials of structural members	7
4.5 Bolted connections	9
4.5.1 Bolt materials	9
4.5.2 General	9
4.5.3 Shear and bearing connections	9
4.5.4 Friction grip type (slip resistant) connections	9
4.5.5 Connections loaded in tension	10
4.6 Pinned connections	10
4.7 Welded connections	10
4.8 Proof of competence for structural members and connections	11
5 Proof of static strength	11
5.1 General	11
5.2 Limit design stresses and forces	11
5.2.1 General	11
5.2.2 Limit design stress in structural members	12
5.2.3 Limit design forces in bolted connections	13
5.2.4 Limit design forces in pinned connections	22
5.2.5 Limit design stresses in welded connections	25
5.3 Execution of the proof	26
5.3.1 Proof for structural members	26
5.3.2 Proof for bolted connections	27
5.3.3 Proof for pinned connections	27
5.3.4 Proof for welded connections	28
6 Proof of fatigue strength	28
6.1 General	28
6.2 Limit design stresses	29
6.2.1 Characteristic fatigue strength	29
6.2.2 Weld quality	30
6.2.3 Requirements for fatigue testing	31
6.3 Stress histories	32
6.3.1 Determination of stress histories	32
6.3.2 Frequency of occurrence of stress cycles	32
6.3.3 Stress history parameter	34
6.3.4 Determination of stress history class, S	36
6.4 Execution of the proof	37
6.5 Determination of the limit design stress range	37
6.5.1 Applicable methods	37
6.5.2 Direct use of stress history parameter	37
6.5.3 Use of S classes	38
6.5.4 Independent concurrent normal and/or shear stresses	39

Annex A (informative) Limit design shear force, $F_{v,Rd}$, in shank per bolt and per shear plane for multiple shear plane connections	40
Annex B (informative) Preloaded bolts	41
Annex C (normative) Design weld stress, $\sigma_{w,Sd}$ and $\tau_{w,Sd}$	43
Annex D (normative) Values of slope constant, m, and characteristic fatigue strength, $\Delta\sigma_c$, $\Delta\tau_c$	47
Annex E (normative) Calculated values of limit design stress range, $\Delta\sigma_{Rd}$	64
Annex F (informative) Evaluation of stress cycles — Example	66
Annex G (informative) Calculation of stiffnesses for connections loaded in tension	68
Bibliography	71

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 20332 was prepared by Technical Committee ISO/TC 96, *Cranes*, Subcommittee SC 10, *Design principles and requirements*.
