Foreword.....	5
1 Scope	1
2 Normative references	1
3 Terms, definitions, symbols and abbreviated terms	2
4 General	8
4.1 General principles	8
4.2 Documentation	8
4.3 Alternative methods	8
4.4 Materials of structural members	8
4.5 Bolted connections	11
4.5.1 Bolt materials	11
4.5.2 General	11
4.5.3 Shear and bearing connections	11
4.5.4 Friction grip type (slip resistant) connections	12
4.5.5 Connections loaded in tension	12
4.6 Pinned connections	12
4.7 Welded connections	12
4.8 Proof-of-competence for structural members and connections	13
5 Proof of static strength	13
5.1 General	13
5.2 Limit design stresses and forces	14
5.2.1 General	14
5.2.2 Limit design stress in structural members	14
5.2.3 Limit design forces in bolted connections	15
5.2.4 Limit design forces in pinned connections	23
5.2.5 Limit design stresses in welded connections	27
5.3 Execution of the proof	29
5.3.1 Proof for structural members	29
5.3.2 Proof for bolted connections	29
5.3.3 Proof for pinned connections	29
5.3.4 Proof for welded connections	30
6 Proof of fatigue strength	31
6.1 General	31
6.2 Limit design stresses	32
6.2.1 Characteristic fatigue strength	32
6.2.2 Weld quality	33
6.2.3 Requirements for fatigue testing	34
6.3 Stress histories	35
6.3.1 Determination of stress histories	35
6.3.2 Frequency of occurrence of stress cycles	35
6.3.3 Stress history parameter	36
6.3.4 Determination of stress history class, S	39
6.4 Execution of the proof	40
6.5 Determination of the limit design stress range	40
6.5.1 Applicable methods	40
6.5.2 Direct use of stress history parameter	40

6.5.3	Use of S classes	41
6.5.4	Independent concurrent normal and/or shear stresses	42
7	Proof of elastic stability	43
7.1	General.....	43
7.2	Lateral buckling of members loaded in compression.....	43
7.2.1	Critical buckling load	43
7.2.2	Limit compressive design force	44
7.3	Buckling of plate fields subjected to compressive and shear stresses	46
7.3.1	General.....	46
7.3.2	Limit design stress with respect to longitudinal stress σ_x	48
7.3.3	Limit design stress with respect to transverse stress σ_y	50
7.3.4	Limit design stress with respect to shear stress τ	51
7.4	Execution of the proof	52
7.4.1	Members loaded in compression	52
7.4.2	Plate fields	52
Annex A (informative) Limit design shear force, $F_{v,Rd}$, in shank per bolt and per shear plane for multiple shear plane connections		54
Annex B (informative) Preloaded bolts		55
Annex C (normative) Design weld stresses, $\sigma_{w,Sd}$ and $\tau_{w,Sd}$		57
Annex D (normative) Values of slope constant, m , and characteristic fatigue strength, $\Delta\sigma_c$, $\Delta\tau_c$		61
Annex E (normative) Calculated values of limit design stress range, $\Delta\sigma_{Rd}$ and $\Delta\sigma_{Rd,1}$		85
Annex F (informative) Evaluation of stress cycles — Example.....		87
Annex G (informative) Calculation of stiffnesses for connections loaded in tension.....		89
Bibliography.....		92

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

The committee responsible for this document is ISO/TC 96, *Cranes*, Subcommittee SC 10, *Design principles and requirements*.

This second edition cancels and replaces the first edition (ISO 20332:2008), which has been technically revised.

This corrected version of ISO 20332:2016 incorporates a correction in Formula (67).
