Sterile drainage catheters and accessory devices for single use

Sondes et dispositifs auxiliaires stériles de drainage non réutilisables
Contents

Foreword ................................................. vi
Introduction ........................................... vii

1 Scope ................................................... 1

2 Normative references ............................. 1

3 Terms and definitions ............................. 1

4 Intended performance ............................ 3

5 General requirements .............................. 3
   5.1 Risk management ................................ 3
   5.2 Biocompatibility .................................. 4
   5.3 Detectability ...................................... 4
   5.4 Surface finish ..................................... 4
   5.5 Size designation .................................. 4
      5.5.1 General ....................................... 4
      5.5.2 Outer diameter ............................... 4
      5.5.3 Effective length .............................. 4
      5.5.4 Nominal balloon inflation volume ....... 5
   5.6 Connector ......................................... 5
   5.7 MRI compatibility ................................ 6
   5.8 Sterilization ....................................... 6

6 Specific requirements ............................. 6
   6.1 Kink stability ..................................... 6
   6.2 Corrosion resistance ............................ 6
   6.3 Resistance to deformation ...................... 6
   6.4 Peak tensile force ............................... 6
      6.4.1 Connections .................................. 6
      6.4.2 Drainage catheters and other accessory devices 7
   6.5 Impact resistance ............................... 7
   6.6 Flow rate .......................................... 7
   6.7 Retention strength .............................. 7
   6.8 Balloon safety .................................... 7
   6.9 Drainage catheter inflation lumen integrity and volume maintenance 8
      6.9.1 General ....................................... 8
      6.9.2 Compliant balloon ......................... 8
      6.9.3 Non-compliant balloon .................... 8
   6.10 Inflated balloon resistance to traction ...... 8
   6.11 Freedom from leakage during aspiration or vacuum ........... 8

7 Information supplied by the manufacturer .... 9
   7.1 General ........................................... 9
   7.2 Marking on the device and/or packaging .... 9
   7.3 Instructions for use ............................. 9

Annex A (informative) Test method for determining kink stability .......................... 11
Annex B (normative) Test method for corrosion resistance ................................. 13
Annex C (normative) Test method for resistance to deformation by suction .......... 14
Annex D (normative) Test method for determining peak tensile force of connections 15
Annex E (normative) Test method for determining peak tensile force of drainage catheter 16
Annex F (normative) Test method for impact resistance of collection device ........ 18
Annex G (normative) Test method for determination of flow rate through drainage catheter 20
Annex H (informative) Test method for retention strength ............................... 22
Annex I (normative) Test method for determining balloon safety .................................................. 24
Annex J (normative) Test method for determining inflation lumen leakage and/or function and/or balloon deflation (drainage catheter with compliant balloon) .................................................. 27
Annex K (normative) Test method for determining balloon size and deflation reliability (drainage catheter with non-compliant balloon) ................................................................. 29
Annex L (normative) Test method for determining inflated balloon resistance to traction ............ 31
Annex M (normative) Test method for resistance to leakage during aspiration or vacuum ............ 35
Bibliography ........................................................................................................................................... 37
ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO’s adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 84, Devices for administration of medicinal products and catheters.

This document is based on EN 1617, Sterile drainage catheters for single use.

This corrected version of ISO 20697:2018 incorporates the following corrections:

— correction of measurements and units in 6.9.3, 6.10, H.2.2 a) and L.2.1;
— deletion of EN 980 from Bibliography;
— minor editorial changes.
Introduction

Guidance on transition periods for implementing the requirements of this document is given in ISO/TR 19244.
