Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Compatibility of materials with gases other than oxygen	1
4 General requirements for oxygen service	1
4.1 Evaluation of materials for oxygen service	1
4.2 Evaluation of metallic materials	2
4.3 Evaluation of non-metallic materials	2
4.4 Test methods and acceptance criteria	3
4.5 Alternative method of acceptance	5
Annex A (informative) Metallic materials commonly used for liquid oxygen service	6
Annex B (normative) Spontaneous ignition test (bomb test)	7
Annex C (normative) Pressure surge test	12
Bibliography	15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 220, *Cryogenic vessels*.

This second edition cancels and replaces the first edition (ISO 21010:2004), which has been technically revised.
