Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 122, *Packaging*.

This first edition of ISO 21067-1, together with ISO 21067-2, cancels and replaces ISO 21067:2007, which has been technically revised and bifurcated into two sections.

ISO 21067 consists of the following parts, under the general title *Packaging — Vocabulary*:

- *Part 1: General terms*
- *Part 2: Packaging and the environment terms*

Introduction

This part of ISO 21067 was compiled from various sources, including the following:

- American National Standards Institute (ANSI);
- ASTM International (ASTM D 996);
- Australian Standards (AS 2400);
- British Standards Institution (BS 3130-1);
- Deutsches Institut für Normung (DIN 55405);
- European Packaging Federation (EPF);
- South African Bureau of Standards (SABS);
- NATO STANAG 4279 (AAP-23);
- UN/ECE Recommendation No. 21.

This part of ISO 21067 is intended to be used as a source document within the global community. This inventory of terms will be useful in a multilingual thesaurus showing concept relationships as well as terms in other languages. Work on this proposed standard began in 1987 and has been under the convenorship of ANSI since 1995 as ISO/TC 122.

This part of ISO 21067 does not cover environmental statements referring to packaging, which are covered by ISO 14021.
