Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Reagents and materials	1
4.1 Extraction	1
4.2 Sample preparation reagents	1
5 Apparatus	2
6 Procedure	3
6.1 Sample extraction	3
6.2 Extract purification	3
6.3 NMR analysis	4
7 Calculation	6
8 Test report	6
Annex A (informative) ^1H NMR spectra of extracts from compounds containing aromatic oil (Figures A.1 and A.3) and MES oil (Figures A.2 and A.4)	8
Annex B (informative) Preparation of clean samples of rubber compounds from tyres	10
Annex C (informative) Precision statement	18
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 21461 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 3, *Raw materials (including latex) for use in the rubber industry*.

This third edition cancels and replaces the second edition (ISO 21461:2009), which has been technically revised.

- In the reagents, *n*-hexane has been replaced by *n*-heptane and methylene chloride is no longer used.
- The precision data have been improved and transferred to an informative annex (Annex C).
