Foreword	iv
1 Scope	1
2 Normative references	2
3 Terms and definitions	2
4 Capacity and performance data of the balancing machine	2
4.1 General	2
4.2 Data for horizontal balancing machines	2
4.3 Data for vertical balancing machines	6
5 Machine features	10
5.1 Principle of operation.....	10
5.2 Arrangement of the machine.....	10
5.3 Indicating system	11
5.4 Plane separation system	12
5.5 Setting and calibration of indication	12
5.6 Other devices	13
6 Minimum achievable residual unbalance.....	13
7 Production efficiency	13
7.1 General	13
7.2 Time per measuring run.....	14
7.3 Unbalance reduction ratio	14
8 Performance qualifying factors	14
9 Installation requirements.....	15
9.1 General	15
9.2 Electrical and pneumatic requirements	15
9.3 Foundation	15
10 Proving rotors and test masses.....	15
10.1 General	15
10.2 Proving rotors.....	15
10.3 Test masses	17
11 Verification tests.....	26
11.1 Requirements for performance and parameter verification.....	26
11.2 Duties of manufacturer and user	26
11.3 Requirement for weighing scale	27
11.4 Test and rechecks	27
11.5 Test speed	27
11.6 Test for minimum achievable residual unbalance, U_{mar}	27
11.7 Test for unbalance reduction ratio, URR	31
11.8 Test for couple unbalance interference on single-plane machines	40
11.9 Compensator test	40
11.10 Simplified tests	41
Annex A (informative) Information provided by the user to the balancing machine manufacturer.....	42
Annex B (informative) URR limit diagrams.....	47
Annex C (informative) Shafts of outboard proving rotors type C.....	50
Annex D (informative) Modifications of proving rotors prepared in accordance with ISO 2953:1985 to this part of ISO 21940	52
Bibliography.....	53

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 21940-21 was prepared by Technical Committee ISO/TC 108, *Mechanical vibration, shock and condition monitoring*, Subcommittee SC 2, *Measurement and evaluation of mechanical vibration and shock as applied to machines, vehicles and structures*.

This first edition of ISO 21940-21 cancels and replaces ISO 2953:1999, of which it constitutes an editorial revision. The main change is that for all definitions, reference is made to ISO 1925. Additionally, the Scope has been reworded in order to exactly reflect what this part of ISO 21940 is dealing with. Furthermore, some rough rounding in the numbers given in the Tables has been smoothed, and some Figures drawn more exactly.

ISO 21940 consists of the following parts, under the general title *Mechanical vibration — Rotor balancing*:

- *Part 1: Introduction*¹⁾
- *Part 2: Vocabulary*²⁾
- *Part 11: Procedures and tolerances for rotors with rigid behaviour*³⁾
- *Part 12: Procedures and tolerances for rotors with flexible behaviour*⁴⁾
- *Part 13: Criteria and safeguards for the in-situ balancing of medium and large rotors*⁵⁾

¹⁾ Revision of ISO 19499:2007, *Mechanical vibration — Balancing — Guidance on the use and application of balancing standards*

²⁾ Revision of ISO 1925:2001, *Mechanical vibration — Balancing — Vocabulary*

³⁾ Revision of ISO 1940-1:2003 + Cor.1:2005, *Mechanical vibration — Balance quality requirements for rotors in a constant (rigid) state — Part 1: Specification and verification of balance tolerances*

⁴⁾ Revision of ISO 11342:1998 + Cor.1:2000, *Mechanical vibration — Methods and criteria for the mechanical balancing of flexible rotors*

⁵⁾ Revision of ISO 20806:2009, *Mechanical vibration — Criteria and safeguards for the in-situ balancing of medium and large rotors*

- *Part 14: Procedures for assessing balance errors*⁶⁾
- *Part 21: Description and evaluation of balancing machine*⁷⁾
- *Part 23: Enclosures and other protective measures for the measuring station of balancing machines*⁸⁾
- *Part 31: Susceptibility and sensitivity of machines to unbalance*⁹⁾
- *Part 32: Shaft and fitment key convention*¹⁰⁾

⁶⁾ Revision of ISO 1940-2:1997, *Mechanical vibration — Balance quality requirements of rigid rotors — Part 2: Balance errors*

⁷⁾ Revision of ISO 2953:1999, *Mechanical vibration — Balancing machines — Description and evaluation*

⁸⁾ Revision of ISO 7475:2002, *Mechanical vibration — Balancing machines — Enclosures and other protective measures for the measuring station*

⁹⁾ Revision of ISO 10814:1996, *Mechanical vibration — Susceptibility and sensitivity of machines to unbalance*

¹⁰⁾ Revision of ISO 8821:1989, *Mechanical vibration — Balancing — Shaft and fitment key convention*
