	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Assessment of CP effectiveness	3
5 Application principles	4
5.1 IR-free potential measurements	4
5.2 DC and AC currents and current densities	4
5.3 Spread resistance	5
5.4 Corrosion rate measurements	5
6 Design considerations	5
6.1 General	5
6.2 Geometry of the defect	5
6.3 Dimension of the coupon base plate	6
6.4 Surface area of the coupon	7
6.5 Other types of coupon geometries	7
7 Monitoring purpose — Selection of installation sites	7
7.1 General	7
7.2 Detailed and comprehensive assessment of CP effectiveness	7
7.3 Assessment of CP effectiveness under DC interference conditions	8
7.4 Assessment of CP effectiveness under AC interference conditions	9
8 Installation procedures	9
9 Commissioning of coupons	10
9.1 Preliminary checking	10
9.2 Start up	10
9.3 Measurement of the settled parameters	11
9.4 Installation and commissioning documents	11
9.5 Frequency of coupon measurement	11
Annex A (informative) Special types and procedures of coupons and probes	12
Annex B (informative) Assessment of the effectiveness of CP under any conditions including DC and/or AC interferences	15
Annex C (informative) Examples of instant-off and current density measurements on coupons — Remote monitoring and remote control	17
Bibliography	22

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 156, *Corrosion of metals and alloys*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
