Foreword.....	iv
1 Scope	1
2 Terms and definitions.....	1
3 Essential elements of a trial	2
3.1 General.....	2
3.2 Selection of the trial site	2
3.3 Conduct of trial	3
3.4 Use of a reference spraying system	4
3.5 Measurements of spray drift.....	4
3.6 Replication of measurements.....	5
4 Measurement of meteorological conditions	5
5 Acceptable conditions for field measurement of spray drift.....	6
6 Recording test conditions	6
6.1 Relative to spraying system	6
6.2 Relative to crop and surface in drift sampling zone	6
6.3 Relative to instrumentation and measurement methods used	6
7 Presentation of results	7
Annex A (normative) Definition of directly sprayed area for spray drift measurement.....	8
Annex B (normative) Description of trial sites and target array for field measurement of spray drift	10
Annex C (informative) Reference spraying systems for field measurement of spray drift	12
Annex D (normative) Selection and handling of spray drift collectors and samplers	13
Annex E (informative) Example presentation for reporting results from field measurement of spray drift	15
Bibliography	17

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 22866 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 6, *Equipment for crop protection*.
