

Second edition
2023-03

Industrial trucks — Verification of stability —

Part 10:

Additional stability test for trucks operating in the special condition of stacking with load laterally displaced by powered devices

Chariots de manutention — Vérification de la stabilité —

Partie 10: Essai de stabilité supplémentaire pour les chariots travaillant dans des conditions de gerbage spéciales avec la charge décentrée latéralement par des dispositifs à moteur

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 110, *Industrial trucks*, Subcommittee SC 2, *Safety of powered industrial trucks*.

This second edition cancels and replaces the first edition (ISO 22915-10:2008), which has been technically revised.

The main changes are as follows:

- references to “This part of ISO 22915” have been replaced by “this document”;
- the applicable types of trucks have been added in the scope;
- cross-references to figures and tests from other parts of the ISO 22915 series have been dated;
- normative references in [Clause 2](#) have been updated;
- the Bibliography has been added;
- in the key to [Figure 1](#), key reference “A-A: longitudinal centre plane” has been added and units (mm) have been specified for dimension “S”.

A list of all parts in the ISO 22915 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
