Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Supplements to API Std 521, 6th edition (2014)	2
4.1 General requirements.....	2
4.2 Chemical reaction.....	2
4.3 Fires.....	2
4.4 Causes for vacuum.....	3
4.5 Considerations for individual PRDs.....	3
4.5.1 General.....	3
4.5.2 Multiple PRDs.....	3
4.6 Piping.....	3
4.6.1 General.....	3
4.6.2 Backpressure.....	3
4.6.3 Line sizing.....	3
4.6.4 Multiple relief scenarios.....	3
4.6.5 Reaction forces.....	3
4.7 Disposal to flare.....	4
4.7.1 General.....	4
4.7.2 Combustion properties.....	4
4.7.3 Combustion methods.....	4
4.7.4 Flare systems designs.....	4
4.7.5 Sizing.....	4
4.7.6 Ignition of flare gases.....	4
4.7.7 Liquid seal drum drums.....	4
4.8 Single PRD protecting several components in a process system.....	4
Bibliography	5

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 67, *Materials, equipment and offshore structures for petroleum, petrochemical and natural gas industries*, Subcommittee SC 6, *Processing equipment and systems*.

This second edition cancels and replaces the first edition (ISO 23251:2006), which has been technically revised. It also incorporates the Technical Corrigendum ISO 23251:2006/Cor.1:2007 and the Amendment ISO 23251:2006/Amd.1:2008.

This document supplements API Std 521, 6th edition (2014).

The technical requirements of this document and API Std 521 used to be identical. In the meantime API Std 521 has been technically revised as API Std 521, 6th edition (2014). The purpose of this document is to bring it up to date, by referencing the current edition of API Std 521 and adding supplementary content.

The main changes compared to the previous edition are as follows:

- Permission to use administrative controls such as car-sealing or chain-locking valves to prevent an over-pressure only if the corrected hydrotest pressures are not exceeded;
- Addition of requirements to cover choke valve failures and acoustic fatigue;
- Strengthening of the requirements to evaluate check valve reverse flow failures;
- Addition of guidance on the use of alternative method for fire relief and blowdown system design.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

Users of this document are informed that further or differing requirements can be needed for individual applications. This document is not intended to inhibit a vendor from offering, or the purchaser accepting, alternative equipment or engineering solutions for the individual application. This can be particularly applicable where there is innovative or developing technology. Where an alternative is offered, the vendor needs to identify any variations from this document and provide details.
