Second edition
2019-08

Hybrid-electric road vehicles — Exhaust emissions and fuel consumption measurements —

Part 1: Non-externally chargeable vehicles

Véhicules routiers électriques hybrides — Mesurages des émissions à l'échappement et de la consommation de carburant —

Partie 1: Véhicules non rechargeables par des moyens externes

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Test conditions and instrumentation	3
4.1 Test conditions.....	3
4.1.1 General.....	3
4.1.2 Ambient temperature.....	3
4.1.3 Vehicle conditions.....	3
4.1.4 Chassis dynamometer conditions.....	4
4.2 Test instrumentation.....	5
5 Measurement of exhaust emissions and fuel consumption	5
5.1 General.....	5
5.2 Test procedure.....	5
5.2.1 Vehicle preconditioning.....	5
5.2.2 Vehicle soak.....	5
5.2.3 Vehicle movement to the test room.....	5
5.2.4 Measurement over ADT.....	5
5.3 Correction of the test results.....	6
5.3.1 General.....	6
5.3.2 Allowable range of RESS energy balance.....	6
5.3.3 Correction procedure by correction coefficient.....	6
6 Calculations and expressions	6
Annex A (informative) Linear correction method using a correction coefficient	7
Annex B (informative) Calculation of allowable range of RESS energy change	10
Annex C (informative) Theory for the linear regression method	12
Annex D (informative) Guidelines for charge balance measurement	14
Bibliography	23

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 37, *Electrically propelled vehicles*.

This second edition cancels and replaces the first edition (ISO 23274-1:2013), which has been technically revised.

The main changes compared to the previous edition are as follows:

- the content of ISO/TR 11955:2008, *Hybrid-electric road vehicles —Guidelines for charge balance measurement* was merged with this document as [Annex D](#).

A list of all parts in the ISO 23274 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
