	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Reagents and materials	3
6 Apparatus	3
7 Heavy water reference standard preparation	4
7.1 General requirements	4
7.2 Storage of high isotopic purity heavy water reference standard	4
7.2.1 Ampoule bottle	4
7.2.2 Specially designed stainless steel container	4
7.3 Lower D ₂ O concentration reference standard preparation	4
8 Sampling	5
8.1 General requirements	5
8.2 Sampling with syringes	5
8.3 Sampling with bottles	5
9 Preparation of calibration curves of the method	5
9.1 General	5
9.2 Preparation of the apparatus	6
9.2.1 FTIR spectrometer	6
9.2.2 Infrared liquid cell	7
9.3 Editing of the method	7
9.4 Background spectrum	7
9.5 Heavy water reference standard spectra	7
9.6 Draw the calibration curves for different D ₂ O concentration ranges	7
10 Procedure	8
10.1 Sample preparation	8
10.1.1 Sample temperature adjustment	8
10.1.2 Sample filtration	8
10.1.3 Sample source check	8
10.2 Sample load and scan	8
10.3 After measurement	8
11 Expression of results	9
11.1 Calculation method	9
11.2 Precision	9
11.3 Uncertainty	10
12 Interferences	10
12.1 Contaminated samples	10
12.2 Air bubbles	10
12.3 Foreign materials on the outside of the cell window	11
13 Test report	11
Annex A (informative) Specially designed stainless steel container for D₂O reference standard	12
Annex B (informative) Interested region suggested for typical curves	14
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 85, *Nuclear energy, nuclear technologies, and radiological protection*, Subcommittee SC 6, *Reactor technology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
