

Second edition
2022-01

Safety and control devices for gas burners and gas-burning appliances — Particular requirements —

Part 9: Mechanical gas thermostats

*Dispositifs de commande et de sécurité pour brûleurs à fioul et pour
appareils à fioul — Exigences particulières —*

Partie 9: Thermostats mécaniques

Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Classification	3
4.1 Classes of controls	3
4.2 Groups of controls	4
4.3 Types of DC supplied controls	4
4.4 Classes of control functions	4
5 Test conditions	4
6 Construction	4
6.1 General	4
6.2 Construction requirements	4
6.2.1 Appearance	4
6.2.2 Holes	4
6.2.3 Breather holes	4
6.2.4 Vent limiter	4
6.2.5 Screwed fastenings	4
6.2.6 Moving parts	4
6.2.7 Sealing caps	5
6.2.8 Dismantling and reassembling for servicing and/or adjustment for controls	5
6.2.9 Auxiliary channels and orifices	5
6.2.10 Pre-setting device	5
6.3 Materials	5
6.3.1 General material requirements	5
6.3.2 Housing	5
6.3.3 Springs providing closing force and sealing force	5
6.3.4 Resistance to corrosion and surface protection	5
6.3.5 Impregnation	5
6.3.6 Seals for glands for moving parts	5
6.3.7 Jointing	5
6.4 Connections	5
6.5 Gas controls employing with electrical components in the gas way	6
6.6 Flow characteristics	6
6.7 Temperature adjustment of adjustable thermostats	6
6.7.1 Range adjustment	6
6.7.2 Set point adjustment	6
6.7.3 Fixed setting thermostat	6
7 Performance	6
7.1 General	6
7.2 Leak-tightness	7
7.2.1 General	7
7.2.2 Requirements	7
7.2.3 Test	7
7.3 Torsion and bending	7
7.4 Rated flow rate	7
7.4.1 General	7
7.4.2 Requirements	7
7.4.3 Test	8
7.5 Durability	8
7.6 Functional requirements	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 161, *Controls and protective devices for gas and/or oil*.

This second edition cancels and replaces the first edition (ISO 23551-9:2015), which has been technically revised.

The main changes compared to the previous edition are as follows:

- the Foreword, Introduction and Scope has been made consistent with new principles and rules for the structure and drafting of ISO and IEC documents;
- the structure and numbering of the clauses have been aligned with ISO 23550:2018;
- specific regional requirements in European countries have been moved to the main document.

A list of all parts in the ISO 23551 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document is designed to be used in combination with ISO 23550. Together with ISO 23550, this document establishes the full requirements as they apply to the product covered by this document.

Where needed, this document adapts ISO 23550 by stating in the corresponding clause:

- “with the following modification”;
- “with the following addition”;
- “is replaced by the following”; or
- “is not applicable”.

In order to identify specific requirements that are particular to this document, that are not already covered by ISO 23550, this document can contain clauses or subclauses that are additional to the structure of ISO 23550. These subclauses are indicated by the introductory sentence: “Subclause (or Annex) specific to this document.”

To ensure global relevance of this document, the differing requirements resulting from practical experience and installation practices in various regions of the world have been taken into account. The variations in basic infrastructure associated with gas and/or oil controls and appliances have also been recognized, some of which are addressed in [Annexes F, G](#) and [H](#). This document intends to provide a basic framework of requirements that recognize these differences.
