Foreword	iv
1 Scope	1
2 Normative references	1
3 Sampling and sample preparation	2
4 Physical and chemical tests on raw rubber	2
4.1 Mooney viscosity	2
4.2 Volatile matter	2
4.3 Ash	2
5 Sulfur-modified chloroprene rubbers — Preparation of the test mix for evaluation	2
5.1 Standard test formulation	2
5.2 Procedure	3
6 Mercaptan-modified chloroprene rubbers — Preparation of the test mix for evaluation	4
6.1 Standard test formulation	4
6.2 Procedure	5
7 Preparation of the test mix for evaluation of sulfur-modified or mercaptan-modified chloroprene with miniature internal mixer (MIM)	7
7.1 Standard test formulations	7
7.2 Procedure	7
8 Evaluation of vulcanization characteristics by a curemeter test	8
8.1 Using an oscillating-disc curemeter	8
8.2 Using a rotorless curemeter	8
9 Evaluation of tensile stress-strain properties of vulcanized test mixes	8
10 Precision	9
11 Test report	9
Annex A (informative) Precision statement	10
Bibliography	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2475 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 3, *Raw materials (including latex) for use in the rubber industry*.

This fifth edition cancels and replaces the fourth edition (ISO 2475:1999), in which:

- the normative references have been updated;
- the precision data (Clause 10) have been moved to informative Annex A.

It also incorporates the Amendment ISO 2475:1999/Amd.1:2005 and the Technical Corrigendum ISO 2475:1999/Cor.1:2001.
