

Second edition
2019-03

Rubber, raw — Determination of volatile-matter content —

Part 2: Thermogravimetric methods using an automatic analyser with an infrared drying unit

Caoutchouc brut — Détermination des matières volatiles —

*Partie 2: Méthodes thermogravimétriques utilisant un analyseur
automatique avec une unité de séchage infrarouge*

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Reagents	2
6 Apparatus	2
6.1 Automatic analyser.....	2
7 Sampling and preparation of test portion	2
8 Procedure	3
8.1 General.....	3
8.2 Determination of endpoints for method A and method B.....	3
8.3 Method A (pre-defined drying time method).....	4
8.4 Method B (in which drying ends when the mass loss rate has decreased to a pre-defined level).....	5
8.5 Calculation of volatile-matter content.....	5
9 Precision	6
10 Test report	6
Annex A (informative) Examples of test conditions	7
Annex B (informative) Precision data	8
Bibliography	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 3, *Raw materials (including latex) for use in the rubber industry*.

This second edition cancels and replaces the first edition (ISO 248-2:2012), which has been technically revised.

The main change compared to the previous edition is the addition of precision data for isoprene rubber in [Table B.2](#), following an additional ITP conducted by Japan in 2017.

A list of all parts in the ISO 248 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
