Sixth edition
2009-12-15

Ductile iron pipes, fittings, accessories and their joints for water applications

*Tuyaux, raccords et accessoires en fonte ductile et leurs assemblages
pour l'eau*

Reference number
ISO 2531:2009(E)

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Technical requirements	5
4.1 General	5
4.2 Pressure classification and dimensional requirements	7
4.3 Material characteristics	11
4.4 Coating and linings for pipes	12
4.5 Coatings and linings for fittings and accessories	13
4.6 Marking	13
5 Leaktightness requirements	13
5.1 Pipes and fittings	13
5.2 Flexible joints	13
5.3 Flanged joints as cast, screwed, welded and adjustable	15
6 Test methods	17
6.1 Dimensions	17
6.2 Straightness of pipes	17
6.3 Tensile test	17
6.4 Brinell hardness	19
6.5 Works leaktightness test of pipes and fittings	20
7 Type tests	20
7.1 Leaktightness of joints to internal pressure	20
7.2 Leaktightness of joints to external pressure	21
7.3 Leaktightness of joints to negative internal pressure	22
7.4 Leaktightness and mechanical resistance of flanged joints	22
8 Tables of dimensions	23
8.1 Socket and spigot pipes	23
8.2 Flanged pipes	25
8.3 Fittings for socketed joints	25
8.4 Fittings for flanged joints	41
Annex A (informative) External protection	59
Annex B (informative) Internal protection	60
Annex C (informative) Dimensions of preferred pressure classes and other pressure class pipes	61
Annex D (normative) Pipe wall thicknesses, stiffness and diametral deflection	63
Annex E (normative) Quality assurance	71
Annex F (informative) Safety factors	72
Bibliography	73

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2531 was prepared by Technical Committee ISO/TC 5, *Ferrous metal pipes and metallic fittings*, Subcommittee SC 2, *Cast iron pipes, fittings and their joints*.

This sixth edition cancels and replaces the fifth edition (ISO 2531:1998), of which it constitutes a technical revision. A new classification system for pipes and fittings based on pressure is introduced with minimum wall thickness determined by allowable operating pressure.
